

 **flexeye** | Security Governance System

## Efficient Information Security Management

Flexeye's Security Governance System (FSGS) ensures that the cost of securing your information is optimised for your risk appetite.

We bring together people, programs, processes and technologies. You move from a world of disparate spreadsheets, documents and databases to a single integrated system:

### 1 Real-time Security Control Monitoring

- Single integrated view of security performance
- Automated measurement of control effectiveness
- Direct input by control owners

### 2 Evolution of your Information Security Management System

- Asset identification, classification & ownership
- Risk assessment & impact analysis
- Threat & vulnerability management
- Control audit, recommendation & selection
- Compliance & certification to ISO 27001, SOX, PCI & other standards

### 3 Management of Issue Remediation

- Audit point remediation workflow
- Exception management

One system, multiple adaptable experiences, total control.

*FSGS improves your security processes and programs to drive a more efficient operation at lower risk.*

### Prototype to Production

Flexeye will quickly give you a tailored prototype system and work with you to create a compelling business case to go into production.

*“ The speed at which the Flexeye team understood, designed and implemented a prototype GRC (governance, risk and compliance) and information security risk assessment tool to my specification was astonishing. It’s been a pleasure working with them. ”*

Gary Evans, Senior Security Consultant at BT Global Services.
